CP_{M-2} = CPI value published by Statistic Iceland 2 months prior to month M

The general cash-flow of the Covered Bonds is determined in real terms on the Issue Date. The nominal value of each future payment depends on the development of the CPI as demonstrated by the formula in paragraph 16 and 17 of Part A of this Final Terms.

Based on data from Statistics Iceland, the year to year inflation, measured as changes in the CPI, has been positive for the last 30 years ranging from 1.5 per cent in 1994 to 32.4 per cent in 1986. The average value over the period is 8.1 per cent with standard deviation of 8.1 per cent. The same statistics for the last 10 years is an average inflation rate of 6.1 per cent. and standard deviation of 3.5 per cent.

The development of the CPI over the past eight years is set out in the table below:

The main target of monetary policy is price stability. A formal inflation target was adopted on March 27, 2001¹.

- The Central Bank of Iceland aims to maintain an average rate of inflation, measured as the annual 12-month increase in the CPI, of as close to 2.5 per cent. as possible.

¹ <http://www.cb.is/monetary-policy/>

- If inflation deviates by more than ± 1.5 percentage point from the target, the Central Bank of Iceland is obliged to submit a report to the Government of Iceland explaining the reasons for the deviations from the target, how the Central Bank of Iceland intends to react and how long it will take to reach the inflation target again in the bank's assessment. The report shall be made public. This shall also contain the Bank's assessment of the main uncertainties pertaining to the inflation forecast. The Bank shall also publish its assessment of the current economic situation and outlook.
- The Central Bank of Iceland shall publish an inflation forecast, projecting inflation two years into the future, which will be outlined in its Monetary Bulletin.

Since monetary policy aims at maintaining price stability, it will not be applied to achieve other economic targets such as a balanced current account or a high level of employment, except insofar as these are compatible with the Central Bank's inflation target.

If policy changes or if the Icelandic economy runs into long-term stagnation it is possible that the level of the CPI will go down over time resulting in individual future payments on the Covered Bonds being reduced in nominal terms and can become lower than the real value of the same payment on the Issue Date.

Information about the CPI can be obtained from <http://www.statice.is/Statistics/Prices-and-consumption/Consumer-price-index>
